

The Agentic Enterprise:

Myth vs. Reality

Why building from scratch is the most expensive mistake in AI.

The Tools vs. The Skyscraper

Claude is phenomenal. It one of the smartest, most capable AI Developer Tools in the world. It is incredibly easy to build a shiny Proof of Concept over a weekend.

But bridging the gap from a cool POC to a secure, enterprise-wide application is the moment you realize you don't actually have a building. You just have a beautiful desk sitting in an empty dirt lot.

Let Salesforce be your building.

The Agentic Enterprise Blueprint

Myth: "DIY AI is just cheap API calls."

DIY with AI Coding Assistants

The Engine: "Cheap" API Calls

The Construction: Build custom Vector DBs

The Risk: Code custom security guardrails

The Plumbing: Hardcode brittle API wrappers

Result: Paying engineers to dig in the dirt.

Claude + Agentforce

The Engine: Bring your favorite LLM

The Foundation: Native Data Cloud integration

The Security: Einstein Trust Layer out-of-the-box

The Plumbing: Instant actionability via Flow & Apex

Result: Developers get the keys to the penthouse.

The Ultimate Developer Playground

You don't choose between the skyscraper and the power tools. You use the power tools to finish the penthouse.

Because the heavy construction is already done, your engineers shouldn't be writing middleware. They can use Cursor and Claude right inside their IDE to write Agent Script, Lightning Web Components, and custom Apex actions—deployed instantly onto a secure enterprise foundation.

Renting a Room vs. Owning the Building

- **The Niche Trap:** AI-native startups offer a great conversational middleman, but they sit completely outside your infrastructure.
- **The Extension Cord:** To get their concierge to process a return or update a record, your IT team must painstakingly run data cables across the street to your backend systems.
- **The Waiting Game:** Every time your business process changes, you have to wait on their landlords to update features.
- **The Reality:** With Agentforce, the AI natively lives inside your building, inheriting all your existing security and business logic.

Agentforce is like a.....

Sky Scraper!

salesforce

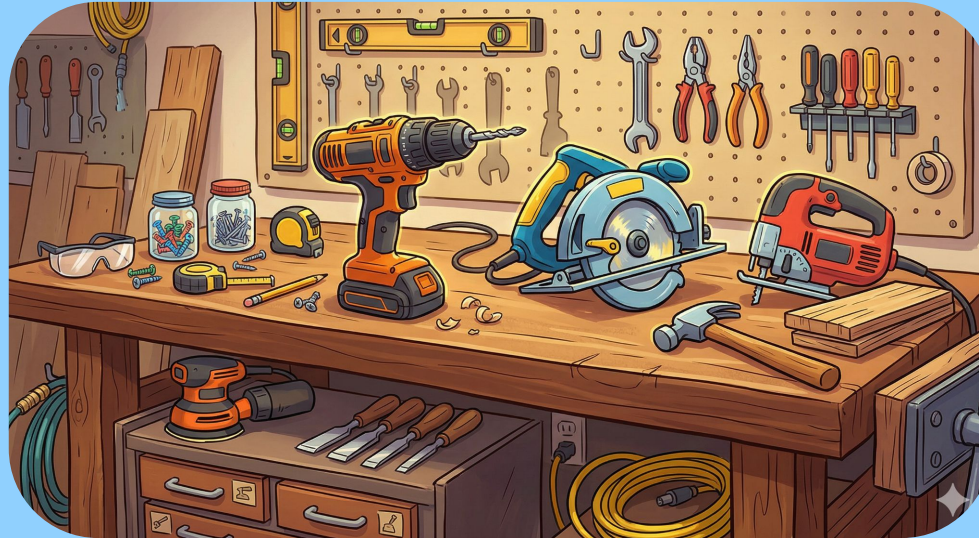

We handle the:

- Plumbing
- Electricity
- Elevators
- Floor Separation
- Maintenance inspections
- Foundation
- Security Desk

90% of what the building needs!

Claude is like your.....

Power Tools!

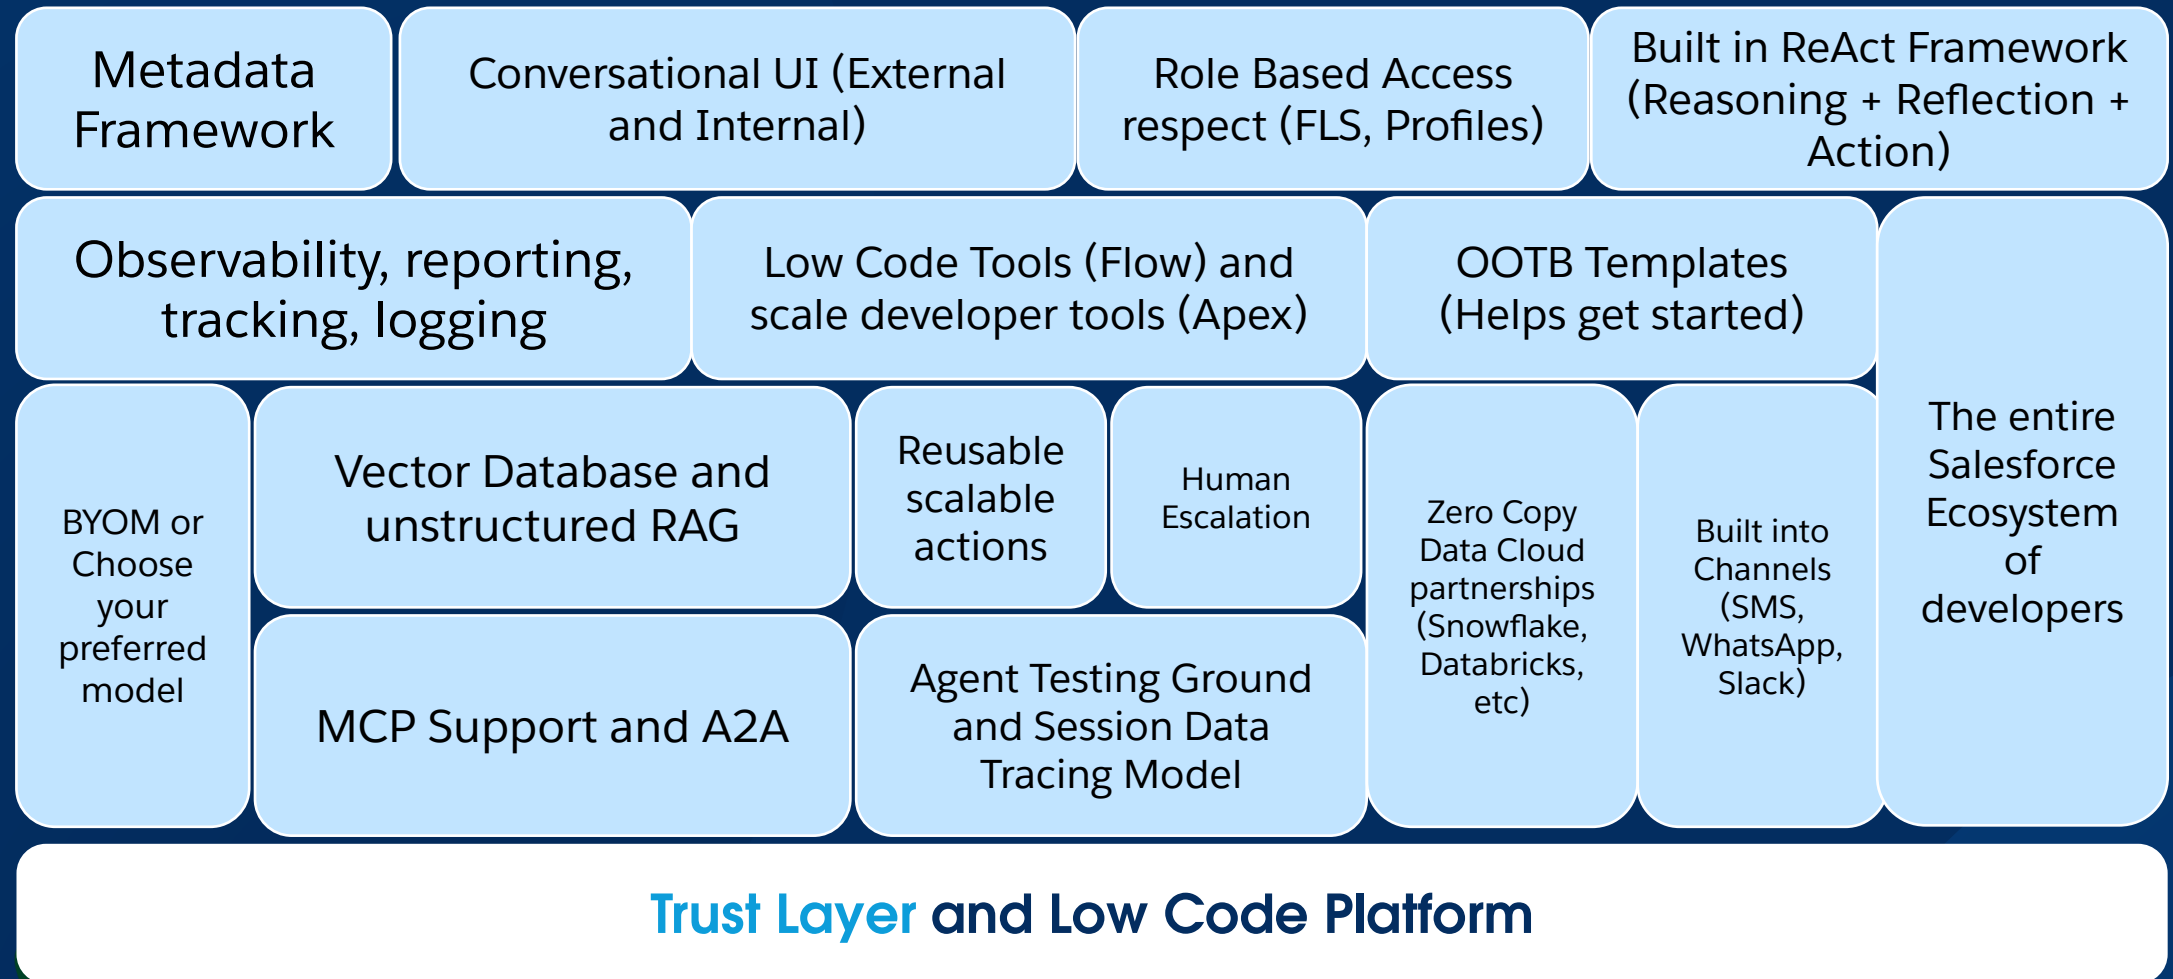

Build Your:

- Layout
- Front Desk
- People
- Chairs
- Color Schemes
- Art
- Lighting

AI Coding Assistants speedup what makes your company your company!

The Agentic Enterprise Blueprint

salesforce

Myths

“I can make Agentforce with Claude and just prompts”

- API calls are super cheap with Claude, we can save money on yearly spend from AF just building with Claude

Confusing the cost of the Power Tools with the cost of building the skyscraper. The LLM is the cheapest part of any project, the real cost comes from building the unglamorous 90% of the building. Are you ready to take on yourself building and maintaining a vector database? Do you want to deal with legal issues around security and data leakage (just one API callout in a slew of AI Slop)

Instead of paying your engineers to build plumbing, security protocols, UI; build on top of the 90% that Salesforce offers. We handle the unglamorous things and use Claude + Agentforce to get you where you want to be faster than you ever could before

Myths

“I need to choose between you and Claude/Codex”

- I want to center my AI strategy around one of you vendors and I do not see how you working together

You can have your cake and eat it too! Claude/Cursor/Codex are incredible powerful tools but you still need a building itself to work on

Salesforce doesn't take away your developers favorite tools, it gives them more power in their hands. Other standalone AI Platforms give you a prompt box. In Salesforce, your engineering team have access to LWC, Apex, Agent Script to build reliable, deterministic agents inside whatever IDE they want accelerate by these AI Coding Assistants! Salesforce is your foundation and Claude/Cursor help accelerate your time to value for your teams!
